

OFFICIAL USER HANDBOOK

Anant Tattva CRM User Guide

Lead se client tak—daily CRM work ko simple, fast aur accurate banane ki step-by-step guide.

Easy Hindi + English Edition

Prepared for CRM users • July 2026

Is guide mein kya milega?

Login, dashboard, lead creation, Excel import, quotation, approval, client master, calendar aur common errors.

Golden rule

Required * fields complete karein, data save hone ka success message dekhein, aur duplicate company banane se bachein.

1. CRM ka simple overview

CRM (Customer Relationship Management) ek central system hai jahan team lead ki enquiry se lekar quotation, approval aur client servicing tak poora record manage karti hai.

Note: Screen aur actions user role ke hisaab se alag ho sakte hain. Admin/Super Admin ko user-management access milta hai.

Main menu

Home	Dashboard, Pending Approval, Notifications, Calendar, User Management
Sales	Lead Generation, Client Master, Add Quotation

2. Login aur navigation

1 Email enter karein

Admin dwara registered official email use karein.
Public self-registration available nahi hai.

2 OTP verify karein

Email par aaya OTP enter karein. OTP share na karein.

3 Dashboard choose karein

Authorized users Home → Dashboard se Operations
ya Sales view select kar sakte hain.

4 Profile check karein

Top-right profile mein name, role aur team sahi honi
chahiye.

Roles ka basic use

Role	Typical responsibility
Sales	Lead entry, follow-up aur quotation preparation
Operation	Client work aur operational processing
Compliance	Compliance-related review/work
Accounts	Commercial/account-related coordination
Manager	Team oversight and review
Admin / Super Admin	Users, teams, access and broader controls

Login problem? Email spelling check karein, latest OTP use karein, spam folder dekhein. Fir bhi issue ho to admin se user status aur registered email verify karayein.

3. Naya lead kaise banayein

1. Sidebar mein **Sales** → **Lead Generation** open karein.
2. **Company** step mein communication mode, status, company, industry, EPR category, Applicant Type, subcategory aur services fill karein.
3. **Address** step mein complete registered/correspondence address add karein.
4. **Contact** step mein contact person, mobile aur email verify karke enter karein.
5. **Assign** step mein responsible team/user select karein.
6. **Save Draft** se incomplete record bachayein; complete data par **Next Step/Save** karein.

Good data practice: Company name official documents ke same rakhein; mobile/email typing error check karein; PIN code aur state match karein.

Applicant Type dependent selection

Applicant Type	Available subcategories
PIBO	Producer, Brand Owner, Importer
SIMP	Producer (Small & Micro), Importer of Raw Material, Manufacturer of Raw Material, Seller
PWP	Recycler, Waste to Energy, Waste to Oil, Cement Co-processing

Pehle **Applicant Type** choose karein. Uske baad usi type ki child category dikhegi. Parent change karne par old child selection clear ho jayegi.

Add New Category

Child dropdown mein Add New Category choose karein. Category current Applicant Type ke andar save hogi. Same parent mein case-insensitive duplicate name allowed nahi hai.

4. Bulk lead upload

1. Lead Generation page par **Upload Excel** click karein.
2. Supported Excel file select karein aur headers check karein.
3. File preview/row count confirm karein.
4. **Import Drafts** click karke processing complete hone dein.
5. Success aur failed row summary padhein; failed rows correct karke sirf corrected data re-upload karein.

Recommended Excel columns

Section	Columns
Company	Company, Status, EPR Category, Applicant Type , PIBO Subcategory, Services Offered, Industry Type
Address	Address, City, PIN, State
Contact	Contact Person, Mobile, Email

Legacy support: Purani file mein sirf "PIBO Category" ho to known value se system parent infer karne ki koshish karta hai. New files mein Applicant Type aur PIBO Subcategory alag columns use karna best hai.

Import se pehle: merged cells, decorative title rows, blank mandatory values aur repeated header rows remove karein. Category spelling exact rakhein.

Agar bulk upload fail ho

- ✓ Required columns aur column names check karein.
- ✓ Applicant Type PIBO/SIMP/PWP mein se ho.
- ✓ Subcategory selected parent ki hi ho.
- ✓ Mobile/email format aur excessively long text correct karein.
- ✓ Error message mein diye first failed row ko Excel mein locate karein.

5. Quotation create aur manage karein

1. **Sales** → **Add Quotation** open karein.
2. Existing lead/client choose karein ya required customer details fill karein.
3. Applicant Type aur matching subcategory select karein.
4. Service/category, financial year, quantity/unit, basic amount aur applicable commercial details add karein.
5. Terms, validity, contact details aur all totals review karein.
6. Save/submit karein. Required approval flow ho to record **Pending Approval** mein jayega.
7. Authorized approval ke baad final quotation download/share karein.

PO kya hai?

PO = Purchase Order. Buyer dwara seller ko issue kiya official order document, jisme service/product, price, terms aur delivery details hoti hain.

Revision rule

Price/terms badalne par approved document overwrite na karein. Proper revised quotation create karke fresh approval follow karein.

Final check before submission

- ✓ Company legal name and address correct
- ✓ Applicant Type + subcategory match
- ✓ Services, FY, unit and amount correct
- ✓ Tax/total and payment terms checked
- ✓ Quotation date and validity checked
- ✓ Contact person and mobile/email verified

Important: Downloaded quotation ko share karne se pehle PDF visually check karein—logo, quotation number, table, totals, terms aur footer clear hone chahiye.

6. Approval se Client Master tak

Pending Approval

- Reviewer customer, services, value, terms aur supporting information check kare.
- **Approve** tabhi karein jab information complete aur correct ho.
- **Reject/return** karte waqt clear correction reason likhein.
- Submitter notification dekhe aur required correction complete kare.

Client Master

Client Master approved/active client ka central record hai. Yahan company identity, address, contacts, services, assignment aur yearly processing information maintain hoti hai.

Search first

Naya client banane se pehle company name, email ya identifier se search karein—duplicate record reporting aur follow-up ko confuse karta hai.

One source of truth

Contact/address change ho to correct master record update karein. Personal notes ya separate files par depend na rahein.

Annual work

Applicable annual year select karke required processing/return data current year ke andar maintain karein.

History

Updates aur assignment history ko meaningful rakhein, taaki next user context samajh sake.

7. Dashboard, notification aur calendar

Dashboard ko sahi tarah use karein

- Dashboard open karke required **Operations** ya **Sales** view choose karein.
- Sales widgets mein time filter ko **Month** par set karke current month select karein.
- Widget number par depend karne ke saath "View Full Report" se detailed records bhi verify karein.
- Zero/No data found ka matlab selected filter mein matching data nahi bhi ho sakta hai.

Notifications

- Bell icon ka unread count regularly clear karein.
- Approval, assignment aur record update notification open karke linked item par action lein.
- Notification read karna action complete karne ke barabar nahi hai.

Calendar & To-do

Item	Best practice
Call	Client/company, date-time, owner aur short purpose add karein.
Meeting	Agenda, participants, correct time and follow-up note maintain karein.
Task	Clear action, due date, priority aur assigned user set karein.
Completion	Work hone ke baad status complete karein; pending falsely na chhodein.

Daily 5-minute routine: Notifications → Pending Approval → Today's Calendar → Assigned Leads → Pending Quotations.

8. Common problems aur solutions

Problem	Kya karein
Page slow/loading	Current action ko repeat-click na karein. Internet check, 15–30 sec wait, then one refresh. Exact page/time note karein.
Save nahi ho raha	Red validation text aur required * fields check karein. Dropdown ki valid option choose karein.
Wrong child categories	Applicant Type reselect karein. Parent badalne par child dobara choose karna required hai.
Excel rows failed	First failed row message padhein; headers, mandatory data aur category relation correct karein.
Duplicate category	Same Applicant Type ke under existing spelling search/select karein; capitalization badal kar duplicate create na karein.
OTP nahi aaya	Email/spam check, latest OTP use, admin se active account verify.
Permission/access denied	Apna assigned role/team admin se verify karayein.
PDF wrong layout	Fresh PDF generate karein; browser preview ke bajay downloaded file check karein, then screenshot + quotation no. share karein.

Support ko kya bhejein: Screenshot, page name, record/quotation ID, exact error message, date-time, aur issue reproduce karne ke steps. Password, OTP ya sensitive credentials kabhi share na karein.

Safe retry method

1. Error message ka screenshot lein.
2. Check karein record already save to nahi hua.
3. Required correction karein.
4. Save/Import button sirf ek baar click karein.

9. One-page daily checklist

Start of day

- ✓ Notifications read
- ✓ Pending approvals reviewed
- ✓ Today's calendar checked
- ✓ Assigned leads prioritized

Before saving a lead

- ✓ Company spelling correct
- ✓ Applicant Type + child valid
- ✓ Contact verified
- ✓ Address and assignment complete

Before quotation

- ✓ Correct customer selected
- ✓ Service and FY correct
- ✓ Amounts/totals checked
- ✓ Terms and validity reviewed

End of day

- ✓ Follow-ups updated
- ✓ Completed tasks closed
- ✓ Drafts reviewed
- ✓ Tomorrow's calendar prepared

Remember

CRM tab useful hota hai jab data **complete, correct aur timely** ho. Har call, follow-up aur status ko same day update karein.

Short workflow: Lead banao → data verify karo → quotation prepare karo → approval complete karo → Client Master update karo → calendar follow-up rakho.

This guide explains the currently available e-Connect CRM workflow. Exact buttons and access may differ by assigned user role and future application updates.
